

Abstract

A drive bearing for printing machines for coupling a rotating tool to a drive shaft of a servomotor. The drive bearing including an element located at an interface between the tool and the drive shaft on a tool axis. The element has an axially projecting coupling cone that engages a counter recess of the drive shaft. The cone is releasably held in the recess by frictional engagement. The angular position of the element is adjustable, and the element is centered and configured to be secured to prevent rotation.
